

Tan Exhaust Wrap

Short Description

Tan Exhaust Wrap

Description

The first step in controlling under hood temperatures is to use DEI's Exhaust Wrap. DEI's Exhaust Wrap is designed to keep heat contained within the metal pipes of the exhaust system. This keeps the heat expanded longer increasing the rate of gas flow out of the engine compartment header and exhaust system pipes. Wrapping your headers with DEI's Exhaust Wrap will reduce under hood temperatures by up to 50% while providing additional horsepower, engine protection and passenger comfort.

- Reduce under hood temperatures
- Improves horsepower
- Only exhaust wrap with installation guide lines
- Added durability and heat retention
-
